

SANSKAR PHOUGAT

+91 90841 21000 — Noida, UP, India

sanskarphougat2004@gmail.com — [linkedin.com/in/sanskar-phougat](https://www.linkedin.com/in/sanskar-phougat) — github.com/Sanskar-bot — tryhackme.com/p/Sanskar2003

Target: Cybersecurity Intern/SOC Analyst. Built practical security systems (phishing detector—90% accuracy; AES-GCM streaming; RSA-hybrid medical data protection). Top 15% on TryHackMe (40+ labs). Proficient: Splunk, Wireshark, Nmap, Burp Suite.

EDUCATION

Jaypee Institute of Information Technology (JIIT), Noida
B.Tech in Electronics and Communication Engineering

July 2023 – Present

EXPERIENCE

Research Intern — CyberPeace Foundation, New Delhi

May 2026 – Aug 2026

- Conducting applied threat research in CyberPeace’s Research Wing (Hybrid, 2–3 hrs/day, 5 days/week). Pre-onboarding, built a multi-stage MITM lab demonstrating RSA key-swap against a simulated E2EE chat app — submitted as technical assessment for selection.

CYBERSECURITY PROJECTS

1. Decentralized Secure Medical Data Sharing System

[GitHub]

Eliminated server-side plaintext exposure for health records by implementing hybrid RSA-2048/AES-256-GCM encryption with client-side processing, secure key lifecycle management, and granular access control — zero trust at the data layer.

2. Email Phishing Detection & OSINT Intelligence Service

[GitHub]

Achieved **90% detection accuracy** on a 500-sample labeled dataset by engineering a phishing detection engine analysing **15+ email header features** (SPF, DKIM, X-Originating-IP); reduced false positives by **23%** via iterative rule tuning. Integrated OSINT-based domain/IP reputation checks to generate automated risk scores — deployable as a mail-gateway plugin.

3. VaultZero — Zero-Knowledge Password Manager

[GitHub]

Client-side-only encryption model: Argon2id key derivation + AES-256-GCM runs fully on-device before data touches the network. Server stores only opaque encrypted blobs with zero plaintext access. Shipped as Chrome/Firefox extension, Android app (native Autofill API), and iOS app (CredentialProvider extension).

4. End-to-End Encrypted Camera Streaming System

[GitHub]

Designed a zero-plaintext video streaming pipeline using AES-256-GCM with per-session HKDF key derivation, ensuring no server-side plaintext exposure at low latency — architected to meet healthcare data-at-rest security standards.

TECHNICAL SKILLS

Security & SOC	SIEM (Splunk, Wazuh), Log Analysis, Incident Response, Threat Intelligence, MITRE ATT&CK, IDS/IPS, IOC Analysis, Vulnerability Assessment
Tools	Splunk, Nmap, Wireshark, Burp Suite, Metasploit, FFUF
Languages	Python, C, C++, Java
Networking	TCP/IP, HTTP/HTTPS, DNS, TLS, SSH
Platforms	Linux (Kali, Ubuntu), Windows
Concepts	OWASP Top 10, Authentication Bypass, SSRF, IDOR, AES-256-GCM, RSA-2048, HKDF, Argon2id

HANDS-ON SECURITY TRAINING — TRYHACKME

- Top 15% globally** (Junior Security Professional) — tryhackme.com/p/Sanskar2003
- Completed **40+ labs**: network analysis, web exploitation, Splunk SIEM, SOC workflows, OWASP Top 10, Wireshark, Nmap, Metasploit

LEADERSHIP & TEACHING

Technical Head, AI Tronics Society

JIIT Noida — Aug 2023 – Present

- Designed and delivered a 2-day Applied Cryptography Workshop (AES-256, RSA-2048, padding oracle attacks) for **40+ students**; led semester-wide Python, Git, and DSA workshops for **100+ students** using Agile sprint model.

CERTIFICATIONS

Google Cybersecurity Professional Certificate

2024

AWS Cloud Practitioner Essentials — Compute, Networking, Storage, IAM

EXTRACURRICULAR & INTERESTS

50+ GitHub contributions | **Pull Shark** badge | Entrepreneurship Pitching Competition | Athletics: Shot Put & Discus Throw | Interests: SOC Operations, Threat Detection, Offensive Security, Cryptography
